

# OFFSHORE WIND DIRECTORY 2011

Produced by **energyengineering** magazine  
Published, October 2010

The offshore wind industry is set to grow rapidly over the next few years, and to reflect this the OFFSHORE WIND DIRECTORY provides an opportunity to focus on developments, innovations and expertise now available.

The information is presented in a single user-friendly format that is divided into themed sections and indexed, with a choice of section headings available.

The OFFSHORE WIND DIRECTORY offers an opportunity to profile your company or establishment and the technology and expertise available with a full A4 colour page editorial-style profile for **only £595**.

Each page profile is put together for you by our design department in a special house style to include contact details, a description of your technology and expertise (up to 300 words), your logo and images (to a maximum of 3) as appropriate. A proof of the page is supplied for your approval before publication. (A sample layout page is available on request)

The OFFSHORE WIND DIRECTORY will be mailed to our 4,000 strong database and will also be available at the relevant conferences and exhibitions we will be attending in 2010/11.

Importantly, the directory will also appear as a digital edition on our **energyengineering.co.uk** website for the next 12 months.

Within the OFFSHORE WIND DIRECTORY we also have some sponsorship packages and full page advertisement spaces - rates are available on request.

To reserve your profile page entry, please return the booking form or call me on +44 (0) 1926 408244 and we will provide details of exactly what you need to supply and the required formats for text, logo, and images plus the section heading required. The final booking deadline is 10 September 2010.
