

Renewables Directory 2011

Produced by **energyengineering** magazine
Published, January 2011

The renewables industry has grown rapidly over the last few years and to reflect this the **RENEWABLES DIRECTORY** provides an opportunity to focus on developments, innovations and expertise now available.

The information is presented in a single user friendly format that is divided into themed sections and indexed with a choice of section headings available.

The renewables directory offers an opportunity to profile your company or establishment and the technology and expertise available with a full A4 colour page editorial style profile for only **£395**.

Each page profile is put together for you by our design department in a special house style to include contact details, a description of your technology and expertise (up to 300 words), your logo and images (to a maximum of 3) as appropriate. A proof of the page is supplied for your approval before publication. (a sample layout page/Directory is available on request)

The renewables directory will be mailed to our 7,000 database and also be available at all the renewable conferences and exhibitions we will be attending in 2010.

Importantly the directory will also appear as a digital edition on our **energyengineering.co.uk** website throughout 2011 and have its own dedicated renewables directory website.

Within the renewables directory we also have some sponsorship packages and full page advertisement spaces - rates are available on request.

To reserve your profile page entry please return the booking form or call me on 01926 408244 and we will provide details of exactly what you need to supply and the required formats for text, logo, and images plus the section heading required. The final booking deadline is the 1 September 2010.
